The **BlobEvent** interface represents events associated with a **Blob**. These blobs are typically, but not necessarily, associated with media content.

Constructor

BlobEvent()

Creates a **BlobEvent** event with the given parameters.

Properties

Inherits properties from its parent **Event**.

BlobEvent.data

Read only

A **Blob** representing the data associated with the event. The event was fired on the **EventTarget** because of something happening on that specific **Blob**.

BlobEvent.timecode

Read only

A **DOMHighResTimeStamp** indicating the difference between the timestamp of the first chunk in data and the timestamp of the first chunk in the first **BlobEvent** produced by this recorder. Note that the timecode in the first produced **BlobEvent** does not need to be zero.

Methods

No specific method; inherits methods from its parent **Event**.

Specifications

Specification	Status	Comment
<a href="#">MediaStream Recording</a> The definition of 'BlobEvent' in that specification.	<b>WD</b> Working Draft	Initial definition.

Browser compatibility

New compatibility tables are in beta

Basic support													
49	?	22	No	36	No	49	49	?	22	36	No	5.0
